

## New Four-way Stop at Despard and Moilliet Intersection

On Wednesday, May 5, City crews will begin work to install a four-way stop at the corner of Despard Avenue and Moilliet Street. Work is expected to take two days and is weather dependent. Traffic flow at this intersection will change for both vehicles and pedestrians and signage will be installed at the intersection indicating the new traffic pattern.

The installation of the four-way stop was directed by Council through resolution approved on April 7 with pedestrian safety top of mind for members of Council. City staff will monitor the four-way stop over the next six months and provide a report to Council in the fall.

While the work is underway, traffic will be controlled in all directions for both vehicles and pedestrians. Expect interruptions to traffic flow and alternating single-lane usage. We ask for the patience of the public and for the public's safety, the instructions provided by the traffic control people must be obeyed.
